

COUNTERTOP WARMING OVERVIEW

Increase the comfort of elegant stone countertops with FeelsWarm® Technology. Adhering to the overhang or bottom surface of a counter, FeelsWarm heating mats provide a pleasant feel by eliminating the cold touch of granite, quartz, marble or concrete.

The product is designed for both existing countertops and new countertop installations and is plugged into a standard outlet without the need for special wiring.

FeelsWarm ultra-thin countertop warmers are very safe for stone and are custom-engineered for each application including shape, wattage and electrical input location.

DG Innovations produces FeelsWarm products for consumers to install themselves on their existing countertops. We also work with contractors, builders, designers, fabricators and remodelers for new construction or renovations.

- *ULTRA THIN:** Only 1/32 inch thick
- *TEMP ADJUSTMENT:** Controller available
- *FAST DELIVERY:** Ships in 2-3 weeks
- *VERSATILE:** Works with all stone surfaces
- *LOW VOLTAGE:** Safely utilizes 12-24 volts
- *WHITE OR BLACK:** In custom & standard sizes
- *PRACTICAL:** Heats where you commonly lean

- | | |
|-----------------|------------------------|
| Kitchen Islands | Concrete Countertops |
| Peninsulas | Hotels & Banks |
| Stone Desks | Outdoor Kitchens |
| Basement Bars | Stainless & Metal Tops |
| Shower Benches | Bathroom Vanities |

PRODUCT OPTIONS

1. Custom Stick-On Heaters

If you already have stone installed in your home or business, FeelsWarm's stick-on heaters can be customized to exactly match the shape of your current countertop overhang (including working around supports). The mat adheres to the underside of a countertop and radiates heat upward to take the chill off the surface. It is most typical to heat the front 10"-15" of the overhang.

2. Custom Compressed Heaters

If you are installing a new countertop where the top of the cabinet has a solid substrate, FeelsWarm offers a customized heating mat that compresses between the substrate & the stone for an even easier installation. Our stick-on mats can also be compressed if you are planning to heat more than just the overhang.

3. Standard Stick-On Heaters

For customers who have a straight, rectangular area such as a desk or overhang, FeelsWarm offers a standard line that is a more affordable option for under-the-counter heat. Keep in mind that you will only feel warmth where the mat is placed.

Consumers can install the product themselves on existing countertops (DIY) or, for new countertops, can work with a FeelsWarm reseller who will:

- Identify the areas on the countertop design where heating is desired.
- Record where 120V household power can be accessed.
- Provide a quotation with different sizing options.
